126,274 ALARMS IN 1943
FIRE LOSS IMMUNITY
99⁹⁸/₁₀₀%

Under wartime conditions Central Station Supervision of Automatic Sprinkler Systems is more than ever an essential safeguard against acts of sabotage or human failure that often make such systems partially or totally useless. Any of the conditions listed on the opposite page, if not promptly detected, could result in serious consequences.

CAUSES OF ALARMS

Waterflow (fires or serious leaks)	2,828
Closed gate valves	34,379
Low water in gravity and surge tanks	6,879
Low temperature in gravity and surge tanks	3,638
High or low air in pressure tanks	9,034
High or low water in pressure tanks	4,162
High or low air in dry pipe systems	28,910
Other abnormal conditions	36,444
TOTAL	126,274

In thousands of sprinklered properties throughout the United States, A. D. T. Sprinkler Supervisory and Waterflow Alarm Service is constantly demonstrating its exceptional effectiveness in minimizing fire and water damage. The following figures showing losses in relation to values protected attest to the remarkable efficiency of the service:

Insurable values of properties protected
\$6,769,181,000
 Ratio of losses to insurable values (1943)
2/100ths of 1%

During the past ten years the ratio of annual losses to insurable values protected has averaged **2/100ths of 1%**—an immunity from fire and water loss of **99 98/100ths %**.
