

HamAI® News Release

HamAI®, amateur radio's premier application vendor, recently announced the release of **BRAINS®**, their new artificial intelligence large language model. **BRAINS®** (**B**etter **R**adio **A**rtificial **I**ntelligence **N**eural **S**ystem) elevates ham operating to an entirely new level.

* * * * *

BRAINS® facilitates “*Total Informational Awareness*” for every aspect of a ham's operating experience. No more endless hours toiling with filters, amplifiers, rotators and more.

Incorporating the most sophisticated algorithms here-to-fore, **BRAINS®** takes absolute control of a ham's operating environment. The all-inclusive **BRAINS®** package includes:

- the recently updated **A-I SDR+® Transceiver Control**,
- the **A-I Robotic Antenna Control®**,
- a premium version of **A-I Logger®**,
- and the all new **A-I DX Plateau® Master Contacts Database**.

A-I DX Plateau® automates contact cleanup by logging QSOs to your preferred logging service. It also performs all processing necessary for a ham to obtain amateur radio's preeminent DX recognition, the worldwide **A-I Supreme Award®**. Simply power up your rig and fire up the software. Then sit back, relax, and let **BRAINS®** take over.

Manuel Tuner, CEO of **HamAI®** says,

*“... the **BRAINS®** large language model fully integrates amateur operating procedures, allowing absolute enjoyment of a ham's lifestyle without the hum drum and tedious aspects of tuning, adjusting filters, rotating antennas, logging and more. Just fire up the software, then sit back and relax. **BRAINS®** will search the bands, rotate and tune the antenna, choose an operating mode, make a contact and log the contact, all while you watch comfortably from your easy chair.”*

BRAINS® is available now from **HamAI®**.

*(TCHN editor: Of course, this news release is in jest. But it probably won't be too distant in the future before an A-I driven application such as **BRAINS®** becomes a reality. Like it or not, we expect A-I to soon become a driving force in amateur radio. What do you think? Email us: treasurecoasthams@gmail.com.)*
